

Partners

Vplus Networks work with a wide range of Partners to deliver competitive solutions to meet our customer needs.

These partnerships cover two types of business relationship:

- Where vplus uses the technology supplied by a partner as part of a tailored solution for a customer allowing us to provide a unique package for every single client.
- Where vplus and a partner(s) combine their business skills and technology in order to meet the customers needs to increase their performance, security and flexibility whilst lowering costs.

Juniper

Juniper Networks transforms the business of networking. A leading global provider of networking and security solutions, Juniper Networks maintains an intense focus on customers who derive strategic value from their networks.

Its customers include major network operators, enterprises, government agencies, and research and educational institutions globally.

Juniper Networks delivers a portfolio of networking solutions that support the complex scale, security and performance of the world's most demanding mission-critical networks, including the world's top 25 service providers and 8 of the top 15 Fortune 500 companies.

SX3

Sx3 was formed in 1997 and is a wholly-owned subsidiary of Northgate Information Solutions. It has grown organically and by acquisition into a significant IT Services and Business Process Outsourcing Company with a turnover of £117m - and a unique focus on customer relationships.

Sx3 is a specialist in IT services and Business Process Outsourcing. Our solutions for local government and education, in particular, are market-leaders. More than 50% of our revenues and over 200 customers come from this sector.

This is partly because so many Sx3 staff has a Local Authority background, and partly because local government user groups are feeding back to us continuously.

CRYPTOCARD- Eliminate static passwords

Founded in 1989, CRYPTOCARD provides cost-effective Secure Password Technology and has established itself as a world-leader in Identity Authentication in more than 70 countries in the government, technology, aerospace, telecommunications financial, and healthcare sectors.

CRYPTOCARD positively authenticates a users identity by coupling something in the users possession (such as a hardware key chain token), with something the user knows (their PIN), and provides centralised authentication for all physical and network access regardless of network infrastructure or user location.

CRYPTOCARD's 2 Factor Authentication is an integral part of the security provided by VPlus' Oe-office everywhere service as the event-based system generates a 'one-time' password that changes with every use, and is virtually impossible to hack, or break.
